

Alan Haugen

Engine Programmer — C++ Developer — Simulation & Graphics

Profile

Engine programmer and game technology student with professional experience contributing to large-scale Unreal Engine projects at Funcom, including work on *Dune: Awakening*. Strong background in C++, real-time systems, simulation, graphics programming, and computer vision. Experienced working in multidisciplinary technical teams and developing performance-oriented software systems. Passionate about low-level programming, algorithms, simulation technology, robotics, and interactive applications.

Education

2026
↑
2023

Inland Norway University of Applied Sciences
Bachelor in Game Technology and Simulation

Bachelor Thesis:

Consistent Offline-Cloud State Synchronization in Survival Video Games

Highlights:

- Internship at Funcom Oslo working on *Dune: Awakening*
- Contributed to a Norwegian Games Awards winning student project: KickAss Award Winner
- Focus areas: game engine architecture, networking, algorithms, graphics, and simulation

2022
↑
2020

Norwegian University of Science and Technology (NTNU)
M.Sc. in Biotechnology

Research Thesis:

Expansion of bovine skeletal muscle cells in a lab-bench bioreactor using edible microcarriers made of eggshell membrane

Highlights:

- Specialized in systems biology and cell biology
- Extensive laboratory and research experience
- Developed strong analytical and scientific problem-solving skills

2020
↑
2017

Norwegian University of Science and Technology (NTNU)
Bachelor in Food Science

Bachelor Thesis:

Use of computer vision for automatic counting and classification of wild fish around aquaculture facilities

Highlights:

- Experience with computer vision and machine learning
- Completed OpenCV courses and practical CV projects
- Worked with environmental monitoring using AI-based image analysis

2017
↑
2016

STEM Qualification Course, Trondheim

Highlights:

- Developed a strong interest in mathematics and analytical problem solving

Key Skills

- Advanced C++ programming
- Unreal Engine
- Real-time systems and game engine programming
- Computer vision and machine learning
- Python
- Algorithms and data structures
- GPU and performance-oriented programming
- OpenCV, YOLOv4, RetinaNet, TensorFlow

Languages

English Native / Fluent

Norwegian Fluent

German Basic

2014
↑
2011

University of Abertay Dundee, Scotland

Diploma in Games Application Development

Received a *distinction* in the first year

Work Experience

2026

Funcom Oslo

Core Engine Programmer Intern

- Worked on engine and gameplay systems for *Dune: Awakening* using Unreal Engine and C++
- Improved system stability through debugging, testing, and memory analysis
- Collaborated with professional gameplay and engine programmers in a production environment

2008
↑
2007

Artplant, Oslo

Programmer

- Designed and implemented GUI systems for the video game *Riding Club Championships*

Selected Projects

Custom Game Engine

Developed a custom game engine with focus on rendering, systems programming, graphics experimentation, and real-time application development.

BattleCry RTS Project

Implemented gameplay systems including unit selection, movement, pathfinding, formations, and combat mechanics using Unreal Engine.

Computer Vision Research

Applied machine learning and computer vision techniques for fish classification and environmental monitoring.

- Trained YOLOv4 and other YOLO object detection models.
- Trained RetinaNet models.
- Designed and implemented a CNN in TensorFlow.
- Used OpenCV for image processing and environmental monitoring.

Recommendations

Funcom Engine Programming Team

“Thanks Alan! Your internship work on the Funcom Engine Programming team has left very positive marks on the whole studio, and on *Dune: Awakening*!

From day one, you jelled straight in and it’s been an absolute pleasure getting to know you as a terrifically bright, hard working and genuinely lovely person!”
